

Illumination

The storm-lashed sea pounded the shore, wind blasted the lonely keep, and thunder rattled the windows in their frames.

Was this really the end?

Only the Ten Invisible Masters knew for sure...

Illumination

**The 1992 British National Science Fiction Convention
17-20 April 1992 at the Norbreck Castle Hotel, Blackpool**

**Progress Report 5: "Grummet"
Easter 1993**

And there was light

Chairman's Announcements

Oh We Did Like To Be Beside The Sea-Side...

Hello, good evening and, for the very last time, welcome to this Illumination Progress Report. What you are reading is our final post-con presentation, a collection of reminiscences that should bring back happy memories for those of you who attended, and thoroughly irritate those of you who didn't. And this article, in particular, is where the chairman is allowed to give you his own highly biased opinion on the subject, coincidentally filling up the front page and introducing the whole shebang.

In fact, the committee of any convention is in a peculiarly bad position to tell how it went. They (we) are the ones who have to attend to the details of how the con is running pretty much the whole time, heads buried in the minutiae of the organisation with no chance to step back and see the con as a whole. The old saw is true; con committees really do organise the con that they want to go to, and then don't get to see any of it. Still, I have a publications officer to keep happy, so I'd better give you some idea of what the committee, or at least the chairman, saw of the con.

My convention, like the rest of the committees', started on Wednesday, slowly and carefully driving an overloaded car up to Blackpool, then stuffing bags and membership packs into the small hours. Then getting up the following morning, with the panic starting to rise, and shuffling bits of the hotel around until they were in the right place. And stuffing more bags. And opening registration. And panicking.

Sometime in the night I broke through the panic barrier, and actually started to enjoy myself. I think this was when I was given the chairmaniactal wallyphone (ahhhh) and allowed to play. I relaxed; the safety net of operations was up and running, so I could start to enjoy things. Also Chris Bell hugged me every time she saw me, which certainly helped; future chairmen take note!

As I said, I didn't get to see much of the con, except for the bits that I was on. I did, however, get to wander up and down the hotel a lot, and everyone certainly seemed to be enjoying themselves. The bars, all of them, were well packed, and despite being taken by surprise (why oh why do hotels never believe how much we drink?), the Norbreck staff managed to get a big enough supply in that they never ran out more than momentarily. The dealers also seemed happy, although they only occupied about a third of the huge Norcalymia room. Much to my surprise they liked having the bar open in there. I had thought that they would have been nervous about having spillable alcohol so near their stock, but no. The art show too seemed to be well attended, although I never had time to take a good look. It needed better lighting than we had, unfortunately, something that we'll have to take in to account for future occasions.

My memories of Illumination are but isolated moments scattered across a beery backdrop, the Jewel in the Pint as it were. Things like the fireworks display, together with racing fire engines, trams and Dermot and co's subtle method of determining which cars had alarms in them; Bernie Evan's face on being told the Guinness was back on; Colin Jack's infectious enthusiasm; Jack Cohen's chaise-longue approach to workshops; Chris Bell's late night debauch; John Bray eating a ribbon to keep it from Alison; and for some strange reason, the taste of diet coke at 3am.

I really must take this last opportunity to thank my committee, without whom Illumination couldn't have happened; Alice and Steve Lawson, David Cooper, Nick Mills, Dave Clements, Amanda Baker, Ivan Towlson, John Bray and Arne Page. Thanks also to Guests of Honour Paul McAuley, Geoff Ryman and Pam Wells, without whom it wouldn't have been half as much fun; to everyone who

helped out, from department heads to gophers; and to everyone who came. It would have been terribly boring without you all.

Rhodri James

Lost Property

Some people did manage to lose things at the convention which were later found by hotel or convention staff. Those items that were not claimed at the convention are still residing at Rhodri's house. He would like people who lost things at the convention to contact him as soon as possible, as he can only keep the lost property box for so long. Items not claimed within two months of PR 5's publication will be donated to charity.

Please contact Rhodri at:

25 Wycliffe Road
Cambridge.

Thanks!

Illumination Wins!

The Illumination Fireworks, run by Armageddon Engineering, won the 1993 Eastercon Award for dramatic presentation. This award was announced at the 1993 Eastercon, Helicon, and was voted on by members of that convention.

We'd like to congratulate Armageddon for this well deserved prize, and look forward to their next pyrotechnic extravaganza!

Dave Clements

Impressions of Illumination

Blackpool is a very particular kind of town. Slightly down-at-heel, but relentlessly friendly. Full of the same food and the same standard of service at the same type of restaurant one hundred times over. This is what the regular holiday-makers want: this is why they come back year after year. But woe betide anyone who turns up before Good Friday, for then the entire town is shut.

I arrive on the Wednesday night, full of hopes for two days of English seaside chips-and-candy-floss, kiss-me-quick fun before the duties of Illumination took me in their grip. I got to the Pleasure Beach by seven that night. It was closed indeed a taunting image of hundreds of amusement booths, their welcoming facades belying the bars and padlocks at the exterior. The wind gushed and gusted, stealing my words the moment they left my mouth; I sought solace in a hamburger. It was burnt, and stale.

Not a very positive introduction to the town in which I planned to hang my hat for the next eight days, but after such a ropy start things could only improve. Thankfully for us all, improvement duly ensued.

The Norbreck Castle is an ideal venue for a convention of around a thousand people. I remember visiting it with the committee a couple of months before Illumination, and being impressed with its size and layout. I commented then that any Eastercon to fail in a hotel such as this would have to be run by a determinedly inept committee, and I think that turned out to be an accurate prediction. Far from 'determinedly inept', the Illumination committee were enthusiastically eager, but not always - er - administratively correct. The convention seemed to lead a

charmed life: they got away with howlers that certain duller and more experienced conrunners would have undoubtedly been lynched for, but nobody seemed to mind.

There is a lot to be said for enthusiasm. Certainly I felt 'properly honoured', a situation which is not always the case with fan guests. My Guest of Honour Interview was ably conducted by Anne Page, and both this and my other guest slot, in which I read excerpts from some of fanzines, were scheduled at prime time in the main programme hall. In all, I appearing on programming in most of the different function rooms, including one workshop. This gave me a feeling of being part of the fabric of the convention, of really belonging there. I got to meet several different Green Room shifts, and to wonder if this was a job I would enjoy doing at some other con. People said 'hi' to me a lot, and I had a number of enjoyable conversations with people I hadn't known before.

Perhaps the most memorable new person I met was a guy called Martin Stewart, and I say this largely because I met him at a London Wellington meeting after the convention, so he's not so jumbled up amongst my bustling memories of Illumination itself. He came over to talk to me because he'd been to my Guest of Honour item and wanted to find out more about doing fanzines. Wow! A convert!! I gave him some names and addresses of fanzine editors to contact, and wait with bated breath in daily anticipation of his own first fanzine. It's wonderful to come across such tangible evidence that people have listened to you and want to do something as a result, and it's almost immaterial whether they actually end up doing it or not.

Perhaps it's odd for someone who's been a fan Guest of Honour to raise this, but being honoured at Illumination put me in an ideal position to see how high a profile fan guests have a national convention. As I said, the committee 'treated me right' every step of the way, but when you sit at a workshop and just one participant shows up, or on the stage for a panel where the participants outnumber the audience, or prepare to be introduced as a Guest of Honour in front of a handful of people, it makes me wonder how much the rank and file convention attendees want to have a fan Guest of Honour at their convention.

I ask this question to see whether it is an issue of importance to convention members in general; I'm not complaining about the small audiences - honest! In many ways it's easier to talk to fewer people, because you recognise many of the faces, and you've got a pretty good idea that those who do turn up have a real interest in being there. I have gone on record as saying that I prefer small conventions (50 - 300 people) to large ones, and partly thanks to my small audiences Illumination felt more like a small convention to me. This is high praise, believe it or not.

To put it bluntly, I would like all convention committees to think seriously about whether they which to honour a fan guest in this way, and if so, to be clear about the particular reasons why (that is why honour a fan at all, as well as why honour that fan in particular).

I have no doubt that Illumination knew why they wanted me for their fan guest: they used me well in their programming, and their outlook was one which matched my own profile over the years and complemented my various areas of involvement in fandom. I am less sure if they knew why they wanted to honour a fan at all, and suspect this was probably because

conventions before them had one so and they wanted to maintain the tradition.

The convention's four days pass in a blur: I work, eat, sleep, have fun hour on hour without taking the time to savour each experience separately. By Monday night I am in that strange mental state combining stress and elation, fatigue and triumph. I survived! I behave like a wild prima-donna, unable to calm myself down or to wind down unaided.

Tuesday and Wednesday are for holidaying and returning to normal. The trams, Fleetwood and Cleveleys, shopping and wandering, pace slowing and fame passing. The leisurely tram ride from Fleetwood wood to the Pleasure Beach ends the week more auspiciously than it began, whirling on rides and munching on hot doughnuts; that heady feeling between sheer exhilaration and not quite being violently sick.

Blackpool is truly open now.

Pam Wells: Fan Guest of Honour

Editorial

Conventions live and die by their publications. This is not always apparent, but they are the only real face of a convention for most of its members until it actually takes place, and by then it's too late. I hope these PRs have been part of what made Illumination a success.

Running the publications has been a strange experience. I'm much more used to writing for other people rather than getting them to write for me, and this has led to deadline problems. It's been mostly enjoyable, but the high point has always been seeing what marvellous new art Colin has done for us. I'll see you all at a Con sometime!

Dave Clements

Illuminated Aliens

[This article originally appeared in the magazine of the CONTACT organisation which arranges an annual meeting simulating first contact with aliens. We thank Martin Fogg for allowing us to reprint it here]

The staging of an 'Alien Design Workshop' at Illumination came at the instigation of CONTACT member John Bray, the convention's science coordinator. My role was to report to John how the Americans go about designing their aliens with nine years experience behind them and also to give a talk about my own CONTACT experiences to an Illumination audience. Because all the organising had to be done at the last minute and because our effort was strictly a trial run, it was decided not to adopt the standard CONTACT framework. The duration of the workshop, which had to compete with many other activities, was just three hours, as opposed to three days, and the work of alien design teams was not cloaked in secrecy until a final role-played climax. We may attempt to stage a full fledged emulation of CONTACT at a future Eastercon.

We were very fortunate to have a magnificent panel of experts who gave a series of introductory talks before the practical work started and who were on hand to give advice as the design process unfolded. Reproductive biologist Jack Cohen started the ball rolling with a hilarious talk, illustrated by slides from his cartoon collection, about the evolutionary pitfalls of designing aliens, in particular those of the humanoid variety. Many of you will have heard of Jack, especially if you happen to have been in the same room as him for more than about a nanosecond! He helps science fiction writers design 'scientifically correct' aliens as a hobby. Some of his past co-creations have been the Yilrane from Harry Harrison's *West of Eden*

series; the Phagors from Brian Aldiss' *Helliconia* series and the Grendels from Niven, Pournelle and Barnes' *The legacy of Heorot*. Jack seemed particularly excited about the new aliens to be revealed soon in a second *Heorot* book, but was very guarded and mysterious about what was so special about them.

Our second speaker was the internationally known palaeontologist and science writer Dougal Dixon. Dougal first gained recognition in 1982 with the publication of his book *After Man* in which was presented a hypothetical zoology of the Earth, fifty million years into the future. It remains to this day an unequalled masterpiece, combining attention to detail with magnificent illustration and scientific and aesthetic plausibility. His later evolutionary thought experiments have been the books *The New Dinosaurs*, in which he speculated over how dinosaurs might have looked today had the asteroid missed 65 million years ago, and the bizarre, and overtly science fictional, *Man After Man*. His talk, for me at least, was the best at the whole convention. Even Jack Cohen appeared completely stunned as Dougal took us through a slide show of some extra-terrestrial life-forms he had been working on some years before. They were by far and away the most impressive aliens I have ever seen, having been evolved in Dougal's mind from starfish-like ancestors. Although some possibilities in nature can be proved by mathematically defined laws of science, others cannot and to make a judgement one still uses gut instinct. Dixon's aliens looked weird, unearthly, but without gimmickry or 'clever' ideas which would render them impossible. One could sense the gut instinct of the whole audience was unanimous, these fantastic creatures really were possible, at one and the same time horrific

and beautiful, seemingly poised on the brink of leaping out of the screen into reality.

Next, it was up to me to deliver my account of CONTACT IX. Since I only had fifteen minutes, I concentrated mainly on COTI (Cultures of the Imagination), describing the efforts of this year's two teams in the context of a three stage process of designing 1) the planet, 2) the alien, and 3) the culture. I think it went over pretty well, although it must be admitted that CONTACT IX's Elvi, with its perfect vertebrate body plan and overall *Star Trek* appearance looked rather a forlorn sight in view of what had been said by the previous speakers.

The introductory session was wound up by a few brief words by biochemist Nick Larter and science fiction author James White. I was particularly interested to meet Jim, the author of the Sector General series, including novels such as *Hospital Station* and *Star Surgeon*, about a gigantic hospital capable of admitting patients from virtually any sentient race in the galaxy! He expressed considerable humility at being in the presence of such leading luminaries as Jack and Dougal, claiming that he had always invented the alien races for his novels purely to please himself rather than to satisfy evolutionary principles. However, I felt his modesty was a little excessive - if one looks through Barlowe's *Guide to Extra-Terrestrials*, an illustrated catalogue of the most famous ET's from science fiction, White's sophont the Cinruss is more convincing than most.

Basically, the upshot of the panel discussion was that humanoid aliens are an understandable requirement for Hollywood film makers who have to fit actors into rubber suits. However, the probability of evolution independently producing another perfectly humanoid body plan on some other planet is so remote that a

serious attempt to design a plausible alien has to be a little more imaginative about anatomy. It was with these thoughts that the 'Build An Alien' workshop finally got underway.

The attendance at the workshop exceeded all expectations: over forty people wanted to participate and the room was packed. Any notion of just having two teams, COTI style, soon evaporated. For a while, it looked as if the entire venture was about to degenerate into chaos. However, eventually Jack, John and myself dragged the crowd into six groups. The eventual plan we came up with was that we were going to design between us six alien races. At the end of each hour, each group would give a two minute presentation of their progress, aided if needs be with viewgraphs and plasticene models. None of the panellists joined any of the teams, but instead were free to provide commentary and assistance on demand. The groups took to the task with enormous enthusiasm, each huddled around a melting pot of ideas from which their sophont was eventually to emerge. Personally, I found merely watching the creative process unfold almost as enjoyable as participating. I chipped in with an occasional piece of planetological expertise, but mostly I wasn't really needed. The process soon gained an almost unstoppable momentum of its own. The participants were learning without having to be taught - they were doing it the easy way - easy because it was fun.

At CONTACT IX the two COTI teams had three days to re-run Genesis; at Illumination we only had three hours. Nevertheless, what was achieved in this short space of time was quite impressive and in contrast to CONTACT IX, where the bulk of creative energy was allocated to designing the 'culture', our people concentrated more on the biology of their particular alien. All the races designed at Illumination were very strange - none even re-

motely human. Some teams really did get it together and design quite convincing life forms: plausible because their creature's anatomical and physiological adaptations sprang logically from their phylogeny (evolutionary history) which itself was created as an outcome of natural selection occurring in the chosen environment. Others lost their way a bit, designing ex-cathedra creatures, organisms freakish to the point of gimmickry, with body parts that were either physically impossible or inconsistent with its purported ancestry. However, the irrepressible Jack Cohen was always at hand to prevent any group from straying too far into comic book territory. Even he though couldn't prevent one lot from ending up with a completely daft creature with a 'carbon fibre' skeleton and the shape, locomotive ability and brains of a sidewinder missile! Well, it got a lot of laughs anyway...

There is insufficient space here to go into detail about the various aliens designed at Illumination, even if I could remember it all. Memorable creations included a slug-like creature from a five gravity planet, living above the ground in a form of vegetation resembling a latticework of woody Gothic arches. They evolved sentience in conjunction with two kinds of communication: 'piping' by blowing air through a dorsal organ situated behind the eyes and 'branch vibes' which involved rapid tapping on branches with their three anterior appendages. One would think that with gravity five times that of Earth, it would be much safer on the ground. Not so in this particular ecological niche! The Gothic arch 'trees' were partially carnivorous, dropping heavy, javelin-like, 'seeds' down on any intruders under the canopy. Eventually however, the slugs learned to modify the trees for their own ends, rendering them harmless and adapting their arching form into dwellings which allowed living at ground level.

The most radically alien creature created at Illumination didn't live on a planet at all. Instead, one team thought they would try and design a free-fall life-form. Its habitat was a Larry Niven-style gas torus, created by the leakage of the atmosphere of a moon orbiting a very hot and massive gas giant. I was very dubious about the realism of such an environment, but taking it as given, it was fascinating to see what the group came up with. They designed a loosely knit colonial organism, consisting of a number of sub-units. These units had once been independent creatures, but were now co-existing in symbiosis, each performing a particular specialised task as part of the overall functioning of the colony. The open structure of the creature, and the fact that it did not have to worry about gravity, allowed the team to come up with some lovely ideas which they illustrated with models. For instance it could change its shape at will, in order to better catch the wind, or to hunt and feed. In particular, when faced with danger, it could completely invert its structure via a simple topological transformation which rearranged sub-units specialised for defence from storage in the interior to form a protective outer layer. Other ideas included a method of genetic information transfer between different colonial species as a by-product of predation. In other words, when you ate something, you could also absorb and incorporate a few of the prey's sub-units as an alternative to digesting them. Jack Cohen was not too keen on this as it replaced his beloved evolution by natural selection totally. However, whether it could have worked is another matter altogether! The creature was finally elevated to sentience by combining imitative behaviour and 'complex game theory interactions' with a neural net-like nervous system and optical and magnetic senses. I didn't understand all of this, but there were some quite high-powered people in this group. At the end of three hours, they had actually succeeded in achieving space flight. It was

quite simple really - light pressure alone was enough to allow solar sail equipped aliens to escape the upper bounds of the gas torus.

One team that was especially keen skipped lunch to go for a fourth hour of brainstorming. They had invented a planet with a powerful magnetic field, an elliptical orbit and a highly inclined spin axis which was prone to intense seasonal variation and violent atmospheric turbulence and oceanic storms. Their sophont evolved from a radially symmetric, frisbee shaped, creature with a row of water jets and suckers about its rim. It preyed on smaller versions, and was preyed upon by bigger versions, of a genus of bizarre organisms which looked like flattened triangles with jets at each corner. These triangles had the ability to extract energy from storm-driven ocean currents by spinning up. Organs capable of generating an electric field allowed the conversion of this spin energy into chemical energy or into an electric discharge for use in attack and defence. As the frisbees evolved into a more directional lifestyle, their morphology altered to incorporate some bilateral features. Eyes were retained in only the front and rear and some of the lateral suckers became modified into flippers. After evolving onto the land, they never completely lost their affinity with the sea. They became seasonal amphibians, returning to the waters during the Winter for their stored warmth, and to close their life cycle. Not only did they mate in the sea, but they also had developed an intimate relationship with the triangles which they herded in large numbers. Eventually, this relationship became totally symbiotic, each frisbee actually incorporating a spinning triangle into its body, providing protection in return for electrical power and access to electromagnetic senses. I needed a lot more convincing that this would actually be possible, but it was a nice idea nonetheless. Like the free-fall colonials de-

scribed above, the frisbees did manage to get into space by the end of the session, but alas time was not available for a COTI style role-played contact between them. It would have been fascinating, both races being as utterly different from each other as they were non-human!

All the participants and organisers of Illumination's 'Build An Alien' workshop greatly enjoyed the experience. As a trial run it was a resounding success and a great credit to John Bray for setting it up at such short notice. Hopefully, the seeds sown by CONTACT this side of the Atlantic will grow and we'll go bigger and better next Easter.

Martyn Fogg

Special Care Baby Unit Appeal

Dear SF Fans,

A letter of introduction from us. We hope to raise money for our local Special Care Baby Unit at the Blackpool Victoria Hospital by supplying SF Fans plastic construction models at reduced rates.

We have raised £18,500 to date and have purchased two monitors worth £16,000 and hope to raise a further £25,000 to purchase one might say a "space age" portable incubator.

We received help from Illumination in Blackpool, April 1992, with a magnificent £813.00, so we are hoping you can help us again by sending for our price list. We are stocking: Horizon, Halcyon - Alien, Dapol Collectable Figures - Dr. Who, AMT - Star Trek, Comet - Dr. Who, Sevans - Dr. Who, Imai - Thunderbirds/ Captain Scarlet.

We hope our prices will be of interest to you and help us raise much needed funds.

Ian Short, Special Care Baby Unit Appeal, 69 Cunliffe Road, Blackpool 0253 798580
